Explanation of Increases/Decreases
FY92 TO FY93 PROGRAM INCREASE

Environmental projects and program requirements are identified in RCS 1383, submitted by active component support installations, with increases involvement by Army Reserve personnel. As a result of this increased participation, and success of implementation of the Environmental Compliance Assessment System, new projects were identified and funds migrated into the environmental account in FY 1992 and FY 1993. This allowed the Army Reserve to maintain compliance with Army "must fund" policy, and required program management costs. The additional funds were required to ensure that Army Reserve activities have the capability to meet applicable environmental standards. Supports efforts to minimize impacts on soil, wildlife and cultural resources; surveys of air emission sources required by Clean Air Act amendments; monitoring of stormwater runoff for potential contaminants as required by clean water regulation; appropriate actions to control non-point source pollution to meet new clean water standards; and testing and removal of leaking underground storage tanks.

FY93 TO FY94 PROGRAM DECREASE

Fewer funds are required to ensure compliance with currently documented and projected "must fund" corrective actions to maintain compliance during this funding year. Fewer storm water discharge permits required than in FY 1993, when new Environmental Protection Agency rules were initiated.

FY94 TO FY95 PROGRAM INCREASE

Additional funds are required to ensure compliance with currently identified projects resulting from applicable environmental standards. Only "must fund" corrective actions, including necessary actions to comply with new air quality standards; treatment and disposal of contaminated soil associated with leaking underground storage tanks; expanded integrated training area management to minimize impacts on soil, wildlife, and other natural resources are funded.

OUTYEAR PROGRAM INCREASES

Currently identified high-cost, priority projects are expected to be completed by the end of FY 1996, and any additional growth is associated with emerging requirements and inflation.
